Subject: **DesignRail® Recycled Content**

Feeney certifies that the aluminum extrusions used in our DesignRail® aluminum railing system contain the following percentages of recycled content:

DesignRail® Aluminum Railing Frames

Percentage of pre-consumer* recycled content – 40%

Percentage of post-consumer** recycled content – 30%

** “Pre-consumer” materials are generated by manufacturers and processors and may consist of scrap, trimmings, and other by-products that were never used in the consumer market.*

*** “Post-consumer” material is an end product that has completed its life cycle as a consumer item and would otherwise have been disposed of as a solid waste. “Post consumer materials” indicates the product was made with these materials that were recycled by residents and other businesses.*

For LEED point certification on a specific project, we can provide the recycled content percentages based on the total weight of the DesignRail® materials used. Please contact us at 1-510-893-9473 for more information.

Feeney’s DesignRail® aluminum extrusions are characteristically durable with a long product life and very low maintenance. They are also lightweight compared to traditional railing materials, resulting in lower shipping and handling costs and less fuel consumption. Additionally, at the end of their usage cycle, DesignRail® extrusions can be fully recycled at metal reclamation sites.

Sincerely,

Andrew Toimil
