## **CABLERAIL™ STAINLESS STEEL CABLE ASSEMBLIES WORK HARD INDOORS AND OUT**

*- Feeney creates a unique, environmentally friendly railing infill  
alternative that complements both railings and views –*

OAKLAND, California, January 2009 – Feeney Architectural Products offers architects and builders its inventive CableRail™ line, which features a wide selection of both standard and custom fabricated stainless steel cable assemblies. Made of beautiful and weather-proof 316-grade stainless steel with a high percentage of recycled content, these cables and components are designed to meet any railing condition and are a low-maintenance, environmentally friendly, and visually unobtrusive alternative to commonly used wooden or metal picket infill.

CableRail™ Standard Assemblies are Feeney’s most popular cable product. They’re available in pre-cut lengths from 5 feet to 70 feet for easy ordering and come in three cable sizes. The pre-cut lengths eliminate time wasted taking precise railing measurements. Installers simply select assemblies that are longer than needed and trim any excess in the field during construction.

“Simplicity of design, clean lines, ease of installation and low maintenance set our distinctive CableRail™ infill cable system apart,” said Andrew Penny, vice president of marketing and advertising at Feeney.

Each standard assembly includes a patented QuickConnect-SS™ fitting with special one-way automatic-locking jaws that allows fast cable installation with very clean lines. The installer simply slides the fitting onto the cable, pulls the cable taut and trims the excess. On the opposite end is an adjustable threaded terminal fitting that comes pre-attached from the factory. The installation requires no special tools beyond a pencil, measuring tape, drill, wrench, pliers and cable cutter.

CableRail™ assemblies are perfect for applications where the view is all-important. The clean, finished look of these strong but slender cables is enhanced by special end fittings that are easily concealed into wood or metal posts. The result is a railing infill that is not only durable and attractive but also virtually invisible, creating an unimpaired view. Feeney provides a 10-year warranty on CableRail™ cable and hardware. The experienced Feeney staff is ready to advise or assist with product selection and technical support.

Feeney Inc, based in Oakland, California, is a leading manufacturer of high quality stainless steel and aluminum railing systems, marketed under the Feeney Architectural Products line. Feeney celebrated its 60<sup>th</sup> anniversary in 2008. For more information and technical support, please call the Customer Service Hotline at 800-888-2418.
