## **Feeney Introduces Expanded Line of CableRail Swageless Quick-Connect® Cable Fittings.**

**Summary: Feeney, Inc has expanded their array of CableRail cable hardware with the introduction of an entire line of swageless Quick-Connect automatic-locking-jaw fittings. These new fittings offer the flexibility of assembling a wide variety of cables in the field without any special crimp tools, making the installation of cable infill for railings easier, faster, and more versatile than ever before.**

OAKLAND, California (PRWEB) July 1, 2011 – Feeney Inc., known for their premier [CableRail brand](#) of architectural cable assemblies, presents their new line of CableRail swageless [Quick-Connect®](#) cable hardware. Feeney has taken the patented automatic-locking-jaw design of their original Quick-Connect® fitting and applied it to an entire line of cable end fittings. Now, customers that require custom assemblies can select from a wide variety of sleek and versatile cable fittings that offer the flexibility of assembling cables in the field and the simplicity, speed, and gripping power of the easy-to-use Quick-Connect® design.

Quick-Connect® fittings attach to the cable by hand in the field without special tools. Special spring-loaded one-way jaws allow the end of the cable to easily slide into the fitting and then automatically grab and lock-on when the cable is pulled back. This simple locking-jaw design makes installation very fast and easy, and if the installer makes a mistake, an easy-to-use release tool is available to open the jaws and release the cable to start over.

“With the expansion of the Quick-Connect® line we’ve provided cable installers more flexibility in the field. Not only are there more fitting styles to accommodate virtually any railing installation condition or design need, but the functional simplicity of the fittings also saves a lot of time during installation,” said Andrew Toimil, VP of operations at Feeney. “There are no time consuming and cumbersome crimp tools or wedge-type compression fitting parts, and no time is wasted taking exact railing measurements. The installer simply purchases the individual fittings along with a spool of cable and then quickly attaches and cuts as he works through the installation. It’s very easy”

These new fittings are designed for 1/8” diameter, 1x19 and 7x7 construction stainless cable and are made from high-quality 316 marine-grade stainless steel with a tumbled satin finish for weather-tough durability, low maintenance, and long lasting beauty. In addition, the stainless steel contains over 70% recycled materials making for a friendlier eco-footprint

“Our goal was to provide our customers with a broader set of time-saving options when their projects required the creativity and beauty of custom assemblies,” said Andy Penny, VP of marketing at Feeney.

“With this new line of products they can enjoy the versatility of custom assemblies with ease of installation that comes with using our field attached Quick-Connect® cable fittings”

Available in an assortment of styles that can be used on wood or metal railing frames, as well as masonry and concrete walls.

Feeney, Inc., based in Oakland, California, is a leading manufacturer of high quality stainless steel and aluminum products, marketed under their Feeney Architectural Products and Feeney Garden Products lines. They celebrated their 63rd anniversary in 2011. For more information and technical support, please call the Customer Service Hotline at 800-888-2418.
